

Figure 1: A 3D visualization of the 1000 Genomes Project data. It shows a 3D scatter plot of genetic data points, with a 3D bar chart showing the distribution of data points across different populations. The populations are labeled as African, European, East Asian, South Asian, and Admixed American. The 3D bar chart shows that the Admixed American population has the highest number of data points, followed by European, East Asian, South Asian, and African.
